

Print on t-shirts directly from your computer !

MS-ZERO

***Ink jet printing machine for printing on
T-shirts & garments,***

8 colour printing process allows to print patterns with a virtually endless colour range and with different resolutions from 360 x 360 dpi up to a maximum of 720 x 5760 dpi. It is possible therefore to personalize the printing giving the maximum expression to the operator's creativity and satisfying the most requiring needs of the end-user.

It allows printing also on dark garments using white ink as basis for the following colour printing.

The printing software (Rip) supplied with the machine can manage this operation, but the picture needs to be changed in Photoshop if it has a white background in completely closed spaces.

To print with white ink a specific pretreatment of the garment with a Liquid and heat pressing is necessary before printing. The printer is shipped with a Pretreatment gun and a roller for this but you need to have a press or an oven.

The pigment inks generally used in this machine, require a fixation after printing by a heated press or hot-air oven.

A standard PC from the market is enough to handle the patterns and the printing process.

The white ink has 2 pumps that keeps the ink circulating between the caping and ink bottles

Technical features:

Printing width: max 31 cm

Printing length: max 48 cm

Substrates thickness: up to 17cm

Printing speed: approx. 60 sec for A4

Printing resolutions: from 360 x 360 dpi to 720x 5760 dpi

Colors: 8 (cmyk+ 4 white)

Colour consumption: about 20 cl/mq

Voltage: 220 Volts

Dimensions: 87x75x55 cm

The logo for Printmark ab features the word 'Printmark' in a large, stylized, blue font with a white outline, followed by 'ab' in a smaller, solid blue font.
